Alternative Energy: Fuel Systems Solutions to Launch U.S. Automotive Alternative Fuel Division in First Quarter 2009

Fuel Systems Solutions, Inc. (Nasdaq:FSYS) will begin manufacturing its innovative alternative fuel solutions for the North American transportation market during the first quarter of 2009 at its U.S. subsidiary, IMPCO Technologies, Inc., which has been serving the industrial market for 50 years. This launch expands the company's global distribution of transportation products. Since the 1960s, Fuel System Solutions' transportation subsidiary, BRC, based in Cherasco, Italy, has been a major provider of alternative fuel systems worldwide that convert gasoline vehicles to run on cleaner burning natural gas or propane, and in 2008, production increased to approximately 800,000 conversions annually.
